WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Spine 529 on the ground, toward the frame; cross feet 400 (seat end) and 300 (under the pedal post), welded under it.
Pedal post 393 tall on the spine, 185 from its far end; weld a bottom bracket shell cut from a scrap bicycle frame on top, its axis across the machine, centre 438 above the ground.
Seat tube: round 32 x 2 tube, 675 long, 172 behind the pedal post; slot its top 40 mm and fit a bicycle seat clamp.
Top arm 504 from the seat tube to the frame end, 600 to 625 up.
End plates 80 wide, 6 mm, welded across the spine end (125 tall) and the top arm end (65 tall); two 9 mm holes in each.
Fit: the lower plate bolts to the low end member, the upper plate to the end post; four M8 bolts. Outrigger 6 mm clear of the frame.
Check: bottom bracket axis square to the spine and level.
