WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A cone cup: 148 across the base, 244 across the lip, 192 tall.
Print a plug the shape of the liner's outside (146 to 236 across, 188 tall), sand it smooth and wax it.
Lay up 4 mm of glass mat and epoxy over the plug; cure, trim the lip square at 192 and pull the plug.
Floor: four 6 mm holes on a 60 mm circle, at 45 degrees to the machine axes, for the bowl bolts.
The shell is the outer mould for the liner (sketch 105).
After the liner is cast: drill about 89 holes of 1.0 mm through shell and liner into the four ring grooves, more in the lower grooves, so jacket water reaches every groove.
Check: wall 4 mm, plus or minus 0.5, all round (callipers at the lip).
