WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Inside: 130 across the floor, 220 across the lip, 180 deep.
Four riffle rings, 6 thick, standing 12 in from the wall, the first
50 above the floor, then every 38.
Core: print the inside shape (with the ring grooves) in six
segments round a central key, so it comes out past the rings:
pull the key, then lift the segments inward one by one.
Set four M6 stainless nuts on the shell floor over its holes,
bolts through from below to hold them, release-coated threads.
Centre the core in the shell on its lip spigot; pour the
polyurethane slowly from one side; cure as the maker says.
The liner bonds to the shell; it is replaced with the shell.
Check: no voids at the ring lips; floor 8 mm thick over the nuts.
