WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A cone cup round the shell with a 12 mm water gap: inside 172 across the floor, 253 at the top, 178 tall; outside 180 to 261.
Print a plug 12 mm bigger all round than the shell; lay up 4 mm.
Floor: 25.5 mm centre hole for the spindle; four 6 mm holes on a 60 mm circle, lined up with the shell's.
Closing ring: 4 mm GFRP annulus, 253 outside, 229 inside.
Fit: four 12 mm spacer bushes stand on the jacket floor over its holes; lower the bowl in, bolt through from below (M6), then bond the closing ring between the shell and the jacket top with epoxy. Seal the spindle hole with an O-ring.
Check: fill through the spindle at 10 kPa; no leak at the ring; water comes out of every groove hole.
