WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut the drum 320 above its own floor; the drum floor is the tub floor. File the rim smooth and level.

Floor: 76 mm centre hole for the standpipe grommet; four 9 mm holes 62.5 each side of centre along the machine and 150 each side across it, onto the two tub members.

Back wall: 98 mm hole, centre 64 above the floor, on the line through the tub centre toward the back, for the tailings pipe.

Lid clamps: drill their bases 45 degrees each side of the front.

Fit: standpipe (63 mm pipe, 50 long) through its grommet, sitting on the upper bearing plate; tailings pipe through its grommet.

Check: fill 50 mm deep with water; no leaks at either grommet.
