WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Brake flange: 6 mm disc 56 across, six M5 holes on a 44 mm circle (the disc's own pattern), welded square on a 25 mm bore shaft collar, 40 across and 20 long. Face it true after welding.
Caliper bracket: 6 mm plate, an L: foot 41 x 60 on the right spindle member (two M6), upright 60 wide, 75 tall, 6 off the disc edge. Drill the caliper's mounting holes to suit the caliper bought (post mount or the older standard).
Fit: collar 173 to 196 up the spindle, disc on the flange; the disc runs in the caliper slot with 2 mm each side.
Check: disc runs true within 0.3 mm (dial or feeler at the pads).
