WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Base: two rails 940 long, 270 apart (centres), and two cross tubes 245 between them at the ends, welded flat on the floor.

Legs: four strips of 18 mm marine plywood, 80 wide; the front two 772 long, the back two 786 long (the deck slopes 3 degrees to the front); cut the tops to that slope.

Legs stand on the rails 40 and 900 from the head end of the base, thin side toward the head, so they flex along the table.

Cleats: eight 80 mm pieces of 40 x 40 x 4 angle, two M8 bolts into the leg and two into the rail or the deck underside.

Tilt: packers under the top cleats set 2 to 4 degrees.

Check: push the deck along by hand; it swings freely 10 mm each way and springs back to centre.
