WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

The table belt is slack (no drive) until the tensioner is set:
this is the clutch between bowl drive and table drive.
Arm: 25 x 6 flat bar, 150 between pivot and idler axle.
Handle: 20 x 6 flat bar, 135 long, welded to the arm at the pivot.
Idler: a 60 mm flat-faced pulley on a 12 mm stub axle.
Pivot: 12 mm bolt through a 6 mm bracket bolted on the front
face of the front top rail, 430 from the pedal end (two M6).
Latch: a notched plate on the bracket holds the handle down
(belt driving) or up (belt slack).
Check: handle down, the belt drives the head without slipping.
