WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Only for the motor option. Base plate 130 x 117 x 6 on top of the back lower rail, two M8 bolts through the rail.
Two dropouts 60 wide, 6 thick, 110 tall, welded upright on the base, 76 apart inside: they take the hub motor's axle.
Axle slots 12 mm wide, centre 96 above the base, open upward so the motor drops in; torque washers stop it turning.
Chain guard: sheet cover outside the motor chain on two spacers from the outer dropout, with a rim round the jackshaft sprocket.
Check: hub motor 10 mm clear of the base and 17 clear of the frame; its sprocket in line with the jackshaft sprocket (straight edge).
