Scale 1:10; looking at the right side (along -X)

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

- Foot plate 75 x 25 x 6 with two 9 mm holes 50 apart.
- Post 294 tall welded upright on the foot plate.
- Arm 175 welded to the post top, pointing to the back.
- Ring: 6 mm plate, 176 inside, 216 outside, welded flat on the arm end; its inside edge is the cone's size 40 above its bottom.
- Fit: the foot bolts on the front top rail at the bowl centre line (two M8). The ring centre must sit over the spindle centre: check with a plumb line from the ring to the spindle top.
- Lift off with two bolts for transport.
- Check: ring level; hopper sits in it without rocking.

GravitySort hopper support: making sketch
